PROJECTS

E-commerce website   **Github Link**
– Tech Stack: This project is a full-stack e-commerce application utilizing Java and Spring Boot for the backend, PostgreSQL for the database, and React for the frontend.
– REST API Integration: The application features a RESTful API that facilitates seamless communication between the frontend and backend, enabling efficient data exchange and user interactions.
– E-commerce Functionality: The application is designed to support typical e-commerce features such as product browsing, adding items to the cart, checkout.

Text Editor   **Github Link**
– The Java-based Text Editor provides users with a versatile platform for creating and editing text documents .
– Customization options like font styles, highlighting, and color control empower users to tailor documents to their specific needs and preferences.
– This flexibility ensures clear, visually engaging documents that effectively communicate the intended message.

Interactive Dashboard
– This project involves the creation of an interactive Excel dashboard for visualizing road accident data, covering the entire development lifecycle.
– The dashboard empowers users to explore trends, identify patterns, and gain insights to inform data-driven road safety strategies.
